http://www.examskey.com/70-346.html

Examskey Microsoft 70-346 exam demo product is here for you to test the quality of the product. This Microsoft 70-346 demo also ensures that we have this product ready unlike most companies, which arrange the product for you as you order These 70-346 exam questions are prepared by Microsoft subject matter specialists. Hence these are most accurate version of the 70-346 exam questions that you can get in the market.

We also offer bundle discount packages for every Microsoft certification track, so you can buy all related exam questions in one convenient bundle. And for corporate clients we also offer bundles for Microsoft certification exams at huge discount.

Check out our **70-346 Exam Page** and **Microsoft Certification Page** for more details of these bundle packages.

Version: 13.0

Question: 1

A company migrates to Office 365. 2,000 active users have valid Office 365 licenses assigned.
An additional 5,000 user accounts were created during the migration and testing processes. These users do not have any licenses assigned.
You need to remove the Office 365 user accounts that do not have any licenses assigned by using the least amount of administrative effort.
Which Windows PowerShell command should you run?

A. Get-MsolUser -All -EnabledFilter "DisabledOnly" | Remove-MsolUser -Force
B. Get-MsolUser-EnabledFilter "DisabledOnly" | Remove-MsolUser -Force
C. Get-MsolUser -All -UnlicensedUsersOnly | Remove-MsolUser -Force
D. Get-MsolUser -UnlicensedUsersOnly | Remove-MsolUser–Force

Answer: C

Question: 2

DRAG DROP
Litware Inc. has an Office 365 Enterprise El plan. Employees have access to all Office 365 services.
Employees in the human resources (HR) department must continue to use the on-premises SharePoint 2013 deployment due to legal requirements.
You need to disable access to SharePoint Online for all HR department employees.
How should you complete the relevant Windows PowerShell commands? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations in the answer area. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

-MsolUser

-MsolUserRole

-MSOnline

-MsolService

-MsolSubscription

-MsolUserLicense

-MsolLicenseOptions

SHAREPOINTWAC

SHAREPOINTSTANDARD

```
Import-Module  MSOnline

$cred = Get-Credential

Connect-MsolService -cred $cred

$license = New   [                    ]

  -AccountSkuId  "litware:STANDARDPACK"

  -DisabledPlans   [                    ]

Get  [                    ] -All -Department "HR" |

Set  [                    ] -LicenseOptions $license
```

Answer:

```
Import-Module  MSOnline

$cred = Get-Credential

Connect-MsolService -cred $cred

$license = New   -MsolLicenseOptions

  -AccountSkuId  "litware:STANDARDPACK"

  -DisabledPlans   SHAREPOINTSTANDARD

Get  -MsolUser -All -Department "HR" |

Set  -MsolUserLicense -LicenseOptions $license
```

Question: 3

HOTSPOT
A company deploys an Office 365 tenant.
You prepare to use the bulk add tool to add users to Office 365.
You need to prepare a file to use with the bulk add tool.
Which fields must you include in the file? To answer, drag the appropriate response to each field. Each response may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Field	Required?
User Name	⬇
Display Name	⬇
First Name	⬇
Last Name	⬇
Job Title	⬇

Field	Required?
User Name	⬇ Yes No
Display Name	⬇ Yes No
First Name	⬇ Yes No
Last Name	⬇ Yes No
Job Title	⬇ Yes No

Answer:

Field	Required?
User Name	**Yes** / No
Display Name	**Yes** / No
First Name	Yes / **No**
Last Name	Yes / **No**
Job Title	Yes / **No**

Question: 4

DRAG DROP

A company has 50 employees that use Office 365.

You need to enforce password complexity requirements for all accounts.

How should you complete the relevant Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

	Answer Area
-MsolUser	
-MsolUserRole	Get [_____] |
-MsolUserPassword	Set [_____] [_____] $true
-StrongPasswordRequired	
-StrongAuthenticationRequirements	

Answer:

Get	-MsolUser		
Set	-MsolUser	-StrongPasswordRequired	$true

Question: 5

DRAG DROP
You are the Office 365 administrator for your company. Your company uses Office 365 for collaboration.
You must reset the password for all of the employees in your company.
You need to ensure that all employees create a new password the next time they sign in to Office 365. How should you complete the relevant Windows PowerShell command? To answer, drag the appropriate Windows PowerShell segment to the correct location or locations. Each Windows PowerShell segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

-MsolUser

-MsolUserPassword

-ForceChangePassword $true

-NewPassword Pass#123#

-PasswordNeverExpires $true

-StrongPasswordRequired

Get-MsolUser –All |

Set

Answer:

Get-MsolUser –All |

Set   -MsolUserPassword   -NewPassword Pass#123#

Question: 6

You are the Office 365 administrator for your company.
You must use Windows PowerShell to manage cloud identities in Office 365. You must use a computer that runs Windows 8 to perform the management tasks.
You need to ensure that the Windows 8 computer has the necessary software installed.

What should you install first?

A. Microsoft Office 365 Best Practices Analyzer for Windows PowerShell
B. Windows PowerShell 4.0
C. Remote Server Administration Tools for Windows
D. Microsoft Online Services Sign-in Assistant

Answer: D

Explanation:

Question: 7

DRAG DROP
You are the Office 365 administrator for your company. The company has two administrators named User1 and User2.
Users must be able to perform the activities as shown in the following table:

Administrator	Activities
User1	o Reset passwords for standard user accounts. o Reset passwords for other members of the same role. o Must **NOT** reset passwords for other administrator accounts.
User2	o Reset passwords for all administrator accounts.

You need to grant the appropriate administrative role to each user.
What should you do? To answer, drag the appropriate role to the correct user. Each role may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer Area

password administrator	
delegate administrator	
billing administrator	
global administrator	

Administrator	Role
User1	
User2	

Answer:

Administrator	Role
User1	password administrator
User2	global administrator

Question: 8

DRAG DROP
A company deploys an Office 365 tenant.
You need to enable multi-factor authentication for Office 365.
Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer Area

Enable multi-factor authentication for all user accounts.

Instruct users to use a mobile phone to complete the registration process.

Create a multi-factor authentication provider with the Per Enabled User usage model.

Create a multi-factor authentication provider with the Per Authentication usage model.

Instruct users to obtain a single-use password to complete the registration process.

Answer:

Box 1:

Enable multi-factor authentication for all user accounts.

Box 2:

Instruct users to use a mobile phone to complete the registration process.

Box 3:

Instruct users to obtain a single-use password to
complete the registration process.

Explanation:

Question: 9

DRAG DROP
Contoso Ltd. plans to use Office 365 services for collaboration between departments. Contoso has one
Active Directory Domain Services domain named contoso.local. You deploy the Windows Azure Active
Directory Sync tool.
You plan to implement single sign-on (SSO) for Office 365.
You need to synchronize only the user accounts that have valid routable domain names and are
members of specified departments.
Which three actions should you perform in sequence? To answer, move the appropriate actions from
the list of actions to the answer area and arrange them in the correct order.

	Answer Area
Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all Contoso users.	
Use domain-based filtering to exclude all users in the domain contoso.local.	
Use the Active Directory Users and Computers MMC snap-in to change the user principal name (UPN) suffix to contoso.com for all users in the specified departments.	
Use user attribute-based filtering to exclude all users that have contoso.local in the userPrincipalName attribute.	
Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Users and Computers MMC snap-in.	
Add the user principal name (UPN) suffix contoso.com to the domain contoso.local by using the Active Directory Domains and Trusts MMC snap-in.	

Answer:

Box 1:

> Add the user principal name (UPN) suffix
> contoso.com to the domain contoso.local by using
> the Active Directory Domains and Trusts MMC snap-
> in.

Box 2:

> Use the Active Directory Users and Computers MMC
> snap-in to change the user principal name (UPN)
> suffix to contoso.com for all users in the specified
> departments.

Box 3:

> Use user attribute-based filtering to exclude all
> users that have contoso.local in the
> userPrincipalName attribute.

Question: 10

An organization plans to migrate to Office 365. You use the Windows Azure Active Directory (AD) Sync tool.
Several users will not migrate to Office 365. You must exclude these users from synchronization. All users must continue to authenticate against the on-premises Active Directory.
You need to synchronize the remaining users.
Which three actions should you perform to ensure users excluded from migration are not synchronized? Each correct answer presents part of the solution.

A. Populate an attribute for each user account.
B. Disable the user accounts in Active Directory.
C. Perform a full synchronization.
D. Configure the connection filter.
E. Run the Windows PowerShell command Set-MsolDirSyncEnabled -EnableDirSync $false.

Answer: A, C, D
