All 3000+ Exams Packages Packages

- ⦿ Bronze Pack \$129 (3 month free updates 3000 + Exams)
- ⦿ Silver Pack \$169 (6 month free updates 3000 + Exams)
- ⦿ Golden Pack \$199 (One year free updates 3000 + Exams)
- ⦿ Diamond Pack \$229 (2 years free updates 3000 + Exams)
- ⦿ Platinum Pack \$299 (Life time free updates 3000 + Exams)

Question: 1

Which three statements are true about Host Checker? (Choose three.)

- A. Host Checker can collect information for use with MAC authentication.
- B. Host Checker can modify a role assignment immediately if a policy fails.
- C. Host Checker can be invoked before a user is allowed to sign in to the Infranet Controller.
- D. The Host Checker Integrity Measurement Verifier (IMV) works only with Odyssey Access Client.
- E. The Host Checker Integrity Measurement Collector (IMC) can run on Windows, Mac, and Linux systems.

Answer: B, C, E

Question: 2

What are two ScreenOS commands you can run on the overlay enforcer to troubleshoot communication with the Infranet Controller? (Choose two.)

- A. get event
- B. get controller status
- C. get auth table infranet
- D. exec infranet controller connect

Answer: A, D

Question: 3

You have configured the PEAP-based 802.1X authentication protocol set shown below. EAP-MS-CHAP-V2 EAP-JUAC EAP-SOH EAP-Generic Token Card Which protocol will be offered first?

- A. EAP-SOH
- B. EAP-JUAC
- C. EAP-MS-CHAP-V2
- D. EAP-Generic Token Card

Answer: A

Question: 4

A user is authenticating to the Infranet Controller with username "fin-jdoe" in a realm with "Merge settings for all assigned roles" selected. The rule mapping rules are as follows: username="*" -> Employee Stop username="fin-*" -> Finance Stop What will be the resulting role(s) assigned to this user?

- A. User will be assigned the Finance role only.
- B. User will be assigned the Employee role only.
- C. User will be assigned both the Employee role and Finance role.
- D. User will be presented with the option of selecting either the Employee role or Finance role.

Answer: B

Question: 5

You have decided to use outer RADIUS proxy for your 802.1X UAC implementation. Which statement is true?

- A. Outer proxy allows for the use of any external authentication server.
- B. Communication between the supplicant and the external authentication server is encrypted end-to-end.
- C. The Infranet Controller adds the authenticator configuration attributes to the messages sent from the external authentication server to the authenticator.
- D. The Infranet Controller authenticates the end user, then relays the information to the external authentication server to retrieve the authenticator configuration attributes.

Answer: B

Question: 6

Which two elements of the access management framework can be used to ensure an endpoint meets security requirements? (Choose two.)

- A. role restriction
- B. authentication realm
- C. network access policy
- D. resource access policy

Answer: A, B

Question: 7

Which three options are valid role restrictions? (Choose three.)

- A. group
- B. browser
- C. certificate
- D. password
- E. source IP

Answer: B, C, E

Question: 8

What are two reasons for using a realm-level Host Checker restriction? (Choose two.)

- A. To assign a user to a role based on whether the user's antivirus is running.
- B. To require an acceptable level of browser encryption before a user logs in.
- C. To prevent a user from entering the user's credentials if a keystroke logger is present.
- D. To prevent a user from accessing resources if the user's endpoint is not running the authorized OS.

Answer: B, C

Question: 9

Which three tools would you use to troubleshoot user interaction problems? (Choose three.)

- A. policy trace
- B. RADIUS diagnostic log
- D. Infranet Controller event log
- E. reachability testing (for example, traceroute)

Answer: A, B, D

Question: 10

At which point in the enforcement process does the enforcer allow an endpoint to access a protected resource?

- A. immediately upon attempting to access the protected resource
- B. when a matching entry for the enforcer is found in the auth table
- C. immediately after the end user authenticates to the Infranet Controller
- D. after the Infranet Controller provides endpoint information for the auth table

Answer: D

Question: 11

What can be specified by a network access policy?

- A. IPsec tunnel endpoint
- B. port VLAN assignment
- C. permitted IP destinations
- D. permitted MAC addresses

Answer: B

Question: 12

Which element is updated by the Endpoint Security Assessment Plug-In (ESAP)?

- A. Statement of Health rule options
- B. virus signature version monitoring
- C. patch management info monitoring
- D. predefined antivirus integrity checks

Answer: D
